

USTC SNST 2014 Autumn Semester Lecture Series

Title: Introduction to Tokamak Fusion Energy Nuclear Science and Technology Research and Development (R&D)

L6: What R & D are needed in order to bridge to **practical** tokamak fusion power in the future (updated!)

Lecturer: YKM Peng
Assistant: Guoliang Xu

Room 1617, 930-1130, January 10, 2015

What to Carry with You?

- Practical energy source is efficient, reliable, economic, of large application, and **safe**.
- CFETR aims to advance far beyond ITER accomplishments.
- A presumed Practical Experimental Reactor would aim to advance far beyond CFETR in technical objectives
- Continue pursuit of new “道” (*via insight*) and developing new “德” (*via innovation*) toward practical fusion core components and supporting equipment.

Next session: discussion on joint evaluation of this lecture series on January 17, 2015

Nuclear power is a practical energy source

- **Efficient:** 1000 MW-yr uses
 - Fuel rod: ~500 tons
 - Oil: 1.4×10^7 barrels
 - Coal: 3.4×10^6 tons
 - Natural gas: 6.6×10^{10} ft³
- **Reliable:** ~90% load factor
- **Economic:** ~2 c/kWh to generate
- **Of large application:** example, ~20% of electricity in U.S., rapidly growing in China

However, handicaps of fission in safety and environmental impact translate into high real total cost of generation \Rightarrow poor economy.

Practical fusion reactor has potential to avoid this handicap while achieving the positive features of fission reactor

Complementarity of ITER and CFETR mission & objectives

	ITER Project (2009)	CFETR Proposal (2013)
Mission	<ul style="list-style-type: none"> • Demonstrate fusion power feasibility • Prove it can be done without impact 	<ul style="list-style-type: none"> • Good complement to ITER (<i>in R&D toward DEMO</i>)
Fusion gain (Q)	<ul style="list-style-type: none"> • Q = 10 (short pulse); 5 (steady) • Ignite and maintain burn for 480 s • Pf & duty cycle not specified 	<ul style="list-style-type: none"> • Pf = 50 ~ 200 MW, Q not specified • Steady state operation • Duty cycle = 0.3 ~ 0.5
Burning plasma & techniques	<ul style="list-style-type: none"> • To be experimentally tested in ITER 	<ul style="list-style-type: none"> • Rely on ITER plasma physics ($q > 3, H \sim 1$) & techniques
Fusion core technology	<ul style="list-style-type: none"> • S/C magnets • Remote handling (RH) 	<ul style="list-style-type: none"> • Rely on ITER • Easy RH change-out of blanket divertor
Tritium fuel	<ul style="list-style-type: none"> • Verify breeding concept 	<ul style="list-style-type: none"> • Demonstrate full self-sustained with $TBR \geq 1.2$
Neutron shield & heat conversion	<ul style="list-style-type: none"> • Refine techniques 	<ul style="list-style-type: none"> • Explore DEMO blanket options

These complement ITER

Moving from CFETR mission & objectives toward a practical reactor

	CFETR Proposal (2013)	Practical Experimental Reactor
Mission	<ul style="list-style-type: none"> • Good complement to ITER (<i>in R&D toward DEMO</i>) 	<ul style="list-style-type: none"> • Practical and safe
Fusion gain (Q)	<ul style="list-style-type: none"> • Pf = 50 ~ 200 MW, Q not specified • Steady state operation • Duty cycle = 0.3 ~ 0.5 	<ul style="list-style-type: none"> • High Q (20-30?) • Continuous operation (~year?) • Duty cycle ~ 0.9?
Burning plasma & techniques	<ul style="list-style-type: none"> • Rely on ITER plasma physics ($q > 3, H \sim 1$) & techniques 	<ul style="list-style-type: none"> • Rely on CFETR physics &
Fusion core technology	<ul style="list-style-type: none"> • Rely on ITER • Easy RH change-out of blanket and divertor 	<ul style="list-style-type: none"> • Rely on CFETR? • Routine RH change-out of blanket divertor?
Tritium fuel	<ul style="list-style-type: none"> • Demonstrate full self-sustained with TBR ≥ 1.2 	<ul style="list-style-type: none"> • Full self-sustained cycle with TBR \geq
Neutron shield & heat conversion	<ul style="list-style-type: none"> • Explore DEMO blanket options 	<ul style="list-style-type: none"> • Deploy most successful blanket
Safety & environment	<ul style="list-style-type: none"> • Add: measure safety & environment conditions? 	<ul style="list-style-type: none"> • Make intrinsically safe

What to Carry with You?

- Practical energy source is efficient, reliable, economic, of large application, and **safe**.
- CFETR aims to advance far beyond ITER accomplishments.
- A presumed Practical Experimental Reactor would aim to advance far beyond CFETR in technical objectives
- Continue pursuit of new “道” (*via insight*) and developing new “德” (*via innovation*) toward practical fusion core components and supporting equipment.

Next session: discussion on joint evaluation of this lecture series on January 17, 2015

Session II: discussion on joint evaluation of this lecture series on January 17, 2015

- Questionnaires to be prepared for student feedback?
- How best to conduct the feedback session?
- Other questions to discuss and prepare for January 17?
